Art Unit: 1625

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruggieri et al, EP 0 690 040 A1. It discloses the instant process, except that the total concentration of n-butane passed over the catalyst ranges from 1.6% to 3.0% by volume. This is just slightly higher than the instantly claimed range, which is 0.5 to 1.5% by volume. Note at p. 3 that it is disclosed that the oxidizing medium is air at a pressure of at least 2.03 bar, and that the percentage of said exhaust gas in the recycle stream is regulated so that oxygen concentration in the reaction mixture ranges from 10 to 18% by volume. Note at p. 4, lines 8-10 that there is a high butane conversion per pass of from 75 to 90%, and high conversion selectivity of 55 to 75%.

Note the many advantages caused by the recycle -low oxygen concentration process which are disclosed at p. 3, line 35 to p. 4, line 36.

Thus it would have been obvious in order to insure safer, higher selectivity operation, to the ordinary worker in the art to perform the process at a lightly lower n-butane concentration. •

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The first part of the amended claim 7 has been omitted. See original claim 7.
